

## ABSTRACT OF THE DISCLOSURE

## PARTICULATE COMPOSITION OF ELETRIPTAN

5 The invention provides a pharmaceutical composition in particulate form, suitable for oral administration, including a core containing eletriptan or a pharmaceutically acceptable salt thereof, the core being coated with a water-insoluble, permeable coating including one or more acrylic copolymer(s) containing trimethylammoniummethylmethacrylate groups, said composition being 10 capable of achieving a sigmoidal pattern of controlled drug release. Such a pharmaceutical composition is particularly useful in the prevention of migraine recurrence.

the first time, and the first time ever, that the two sides had agreed to a deal.
